**Dr. Christopher Schmid** is Professor of Biostatistics at Brown University School of Public Health where he co-founded the Center for Evidence Synthesis in Health. He directs the Biostatistics, Epidemiology and Research Design (BERD) core of Advance Rhode Island Clinical and Translational Research. He is a Fellow of the American Statistical Association, founding Editor of the journal *Research Synthesis Methods,* long-time statistical editor of the *American Journal of Kidney Diseases* and former member of the Drug Safety and Risk Management Committee for FDA. His research focuses on Bayesian methods for meta-analysis, methods for developing and assessing predictive models using data from multiple sources and on methods for design and analysis of N-of-1 trials. He has a long record of collaborative research in diverse areas of medicine and health with academia, government and industry and nearly 300 peer-reviewed publications. He has coauthored consensus CONSORT reporting guidelines for N-of-1 trials and single-case designs, and PRISMA guidelines extensions for meta-analysis of individual participant studies and for network meta-analyses as well as the Institute of Medicine report that established US standards for systematic reviews. He has served as lead statistician on several N-of-1 trial consortia. Dr. Schmid graduated from Haverford College with a BA in Mathematics and received his PhD in Statistics from Harvard University.
